

Basic and example datasets

[The R Datasets Package](#)

[Wooldridge package in R for datasets](#)

[Collection of Datasets - available for download or with different R packages](#) (This one is probably the most comprehensive list - the first column has the name of the package, which you can install in R and then read in the data directly from the package.

More involved datasets and replication data from published work

[Aid Data Replication Datasets](#)

[Grab World Bank Data in R with {WDI} | Steven V. Miller](#)

[Find replication datasets published in Econ journals, and filter by method](#) (a great resource!)

[Harvard Dataverse](#) contains replication data from many articles, not just economics

[PRIO \(Peace Research Institute Oslo\) Replication data](#)

[Gallup Survey data](#)

[World Values Survey](#)

[Global health data](#)

[Kaggle](#) and [Data.world](#) have a lot of user-contributed, simple, and often very cool and funny datasets! Be aware that user-contributed means there might be errors. You may have to sign up to download the data.

[PRIO-Grid](#) has data on grid-cells across the world, which is useful for temperature, rainfall, and drought. It also has other interesting geographic and geological data.
